

Reporting & Delivery

Raise Productivity and Margins While Delivering Faster for Your Customers

With MetaField® on your desktop and mobile devices, you have a repository of verified information for analysis to easily review data, generate reports and quickly deliver this critical information to your project team. Project managers and engineers can instantly access and analyze field and laboratory outputs to validate suitability against project specifications, and can seamlessly create reports, delivering results and recommendations to clients and other key stakeholders.

DATA, ANALYSIS AND DELIVERY ALL ON ONE PLATFORM

Field data and laboratory outputs are tracked and managed in MetaField. The platform enables users to create reports based on the transactions they want and need to deliver. Zero data re-entry improves project team efficiency, and ensures information is up to date, accurate, and delivered timely to the customer.

Project engineers get a complete project overview all in one place, making it easier to analyze results and provide clients with reliable and accurate recommendations.

- Data is entered once, reducing errors, and is accessible and updated in real time
- External project information (documents, photos, plans, etc.) can be uploaded to fully eliminate the need for paper-based folders
- Comprehensive repository of information facilitates efficient cross-departmental communication and collaboration
- Easily generate ASTM or AASHTO compliant reports to meet specific project requirements
- MetaField is built to be used across many construction and engineering disciplines

REDUCE PROJECT DELIVERY CYCLE TIME

With all of your information organized on one platform, faster delivery of high-quality standardized reports dramatically reduces invoicing cycles.

- Data and observations are organized by project
- Select only the results you need for your report
- Ability to batch print or download multiple reports
- Easily create consolidated reports or report associations to support invoice or project summary reports
- Allows you to email reports directly from MetaField
- Upload reports into your project repository or AgilePort® customer portal
- DIY Forms and Report engine allows you full control to build your own based on clients requirements
- Over 100 standard reports available across multiple disciplines

DIGITAL SIGNATURE AND DELIVERY

When the project engineer is ready to deliver results and recommendations, users can optionally apply an encrypted digital signature to one or more reports using AgileStamp®. Once authorized, the reports can be pushed out to clients and key project stakeholders via email or a customer portal using AgilePort®.

SECURE REPORT REPOSITORY

Report delivery rarely means you'll never have to look at those results again. Whether you need a report for related projects, or your clients asks you to revisit results, MetaField provides a secure, easily searchable report repository so that you have access to the information you need when you need it.

Built-in integration with:	AgilePort® Client Portal, AgileStamp® Digital Signatures
Custom integration options:	Axium, BST Enterprise, Deltek Vision, Microsoft Dynamics AX/SL, Clearview InFocus and more
System Requirements and Specifications:	Optimized for desktop and mobile, including iOS, Android, and Windows
Remote user:	3G/4G Cellular, Wi-Fi, or wired internet-connected device with a JavaScript/HTML5 compatible browser
Office user:	Broadband, commercial grade connection to the internet using PC with compatible versions of Google Chrome, FireFox, or Microsoft Internet Explorer

MetaField is a subscription-based Software-as-a-Service (SaaS) platform that is billed monthly for each user, and is accessible on any computer or mobile device.
